

To the VIth Intern. Botan. Congress, Amsterdam, 1935
Section of "Nomina conservanda"

Motion to declare: "nomina conservanda" the genera: Endlicheria Nees (Lauraceae) and Emeorrhiza Pohl (Rubiaceae), and "nomina rejicienda" the genera: Endlichera Presl (Rubiaceae) and Schauera Nees (Lauraceae).

nomina conserv.

nomina rejic.

Lauraceae	Endlicheria Nees, Linnaea VIII(1833)p.37; about 30 species in tropical America	Schauera Nees, Lindley, Introd. Nat. Syst. 2nd ed. (1836) p. 202 in adn.
Rubiaceae	Emeorrhiza Pohl, (nomen nudum) Flora VIII(1825) p.183; 1 species in America.	Endlichera Presl, Symb. bot. I(1832) p. 73.

Endlicheria Nees (Laurac.) has been published in Linnaea VIII(1833)p.37, with 2 species: *E. hirsuta* Nees, and *E. sericea* Nees. Nees himself altered this name into *Goepertia* (Syst. Laur. p. 365, 1836) when he discovered the publication of Presl in Symb. Bot. I(1832) p.73, where the latter described a Rubiaceae genus: *Endlichera* Presl. The name *Goepertia*, however, had already been published as a genus (genus spurium) of the Scitamineae by Nees in Linnaea VI(1831)p. 337 (see Nees in adn. in Syst. Laur. p. 365). In: Lindley, Introd. Nat. Syst., 2nd ed. (1836) p.202 in adn., Nees suggested that the name of the Lauraceous genus should be altered into: *Schauera* Nees (Laurac.), if *Endlichera* Presl (Rubiaceae) was kept. Supposing that this conditionally published name is valid, *Schauera* Nees should be kept for the Lauraceous genus. The consequence will be, that the name *Schaueria* Nees (Acanthaceae) in Linnaea XIII(1839) Lit. Ber. p. 119, must be rejected. *Endlichera* Presl (Rubiaceae) has an older synonym: *Emeorrhiza* Pohl, Flora VIII(1825), though a "nomen nudum" (Mez in his Monograph on the Lauraceae erroneously quotes the name *Endlichera* Presl as a "nomen nudum"). *Endlichera* Presl (Rubiaceae) has one species only, whereas *Endlicheria* Nees (Laurac.) is still being enriched with new species and now includes about 30 species.

Therefore it seems advisable to keep the name *Endlicheria* Nees, and to reject: *Schauera* Nees (Laurac.), by which *Schaueria* Nees (Acanthac.) too can be maintained.

A. Kostermans,

Botan. Museum & Herbarium,

Utrecht - Netherlands.

20 May 1935.
